

Chest of drawers

The chest of drawers is based on a simple board construction. Top shelf and sides are joined by means of a Lapped Finger Tenon Joint. The board shelves or bottom shelf are mortised in or through the sides by means of Finger Tenons. The Secret Finger Tenon Joint is put to use as the joining element for the drawer sides with front, back and bottom shelf.

The chest of drawers can be made with various numbers of drawers. The height of the drawers can be adapted to the given requirements.

Used wood joints

- **F_003** Lapped Finger Tenons
- **F_007** Secret Finger Tenons
- **F_010** Finger Tenons
